2017.01 revised version

**Proface Systems Co. Ltd. is  
 To become the bridge between Japan  
 and the world in the global society,  
 To achieve this target, put efforts every day.  
 By working earnestly, we will initiate work to be  
 proud of in the next generation.**

Since its establishment, by understanding the customer needs more than anyone else, we have a mission to deliver the excitement and the best satisfaction through high-quality IT services. In particular, in strength to secure excellent human resources, by taking advantage of the pipe with major partners not only in Japan, but on a global scale including China and India, we have formed a team that has carefully selected the best human resources to meet the customer needs.

Going forward, we will push on by not changing the corporate attitude to strengthen the ties with partner companies, and to contribute to the customer's innovation by providing high-quality system, information digitization, and industry globalization.

Being in the mature and modern economy of Japan, wall that we are trying to overcome now, is an attempt to facilitate the communication of society. With the rapid decline in production population of Japan due to decreasing birthrate and aging population, it is clear that operators adding small and medium-sized values will be eliminated. With the approach to maintain present status, our business is no exception and I believe that many difficulties lie ahead.

By continue to having the management style of the attack even in any crisis situation, considering the crisis as a chance to grow our company, I promise to steadily grow the company. As a borderless company to challenge the ICT field with a new inspiration and extraordinary practical ability game, because we will continue to boldly transform the company in the future, expect pleasing future for the company.

**PROFACE SYSTEMS Co., Ltd** Representative Director **Kazuaki Den**

## System Development

**By providing consistent services for development,  
 maintenance till operation,  
 We support the optimal system construction process.**

### ● Outsourcing solutions

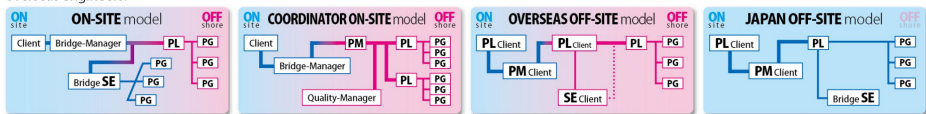

By providing consistent services for development, maintenance till operation, we support the optimal system construction process. From new system construction and parallel operation for old and new systems based on the reasonable proposals and development, we materialize the efficiency of the business by ensuring performance, security strengthening and stability. In addition, by quality management system (ISO9001), we provide high-quality services by avoiding localization of business and technology and providing homogenization of the development process, organizational business activities etc.

### ● Various, business-specific contract areas

We strive to develop, in [manufacturing and distribution (wholesale and retail)] industry, the ERP business in general, such as ordering, sales management, production management, financial accounting and human resources management and customer management, In [information communication industry] industry, collection and analysis of company information etc., In [government agencies] industry, back-office business, window management for administrative service, financial accounting business, science and technology literature portal site business, article management business, corporate diagnostic business, In [financial] industry, securities, stock, FX trading business, exchange business, analysis business and credit comprehensive examination business.

### ● Offshore development structure

In the Company, flexible offshore development structure that suits the development projects needs is materialized speedily in collaboration with overseas engineers.

## IOT Solution

**Our company contributes to IoT Solutions as a reliable  
 development partner. Creative planning and experience  
 in advanced technologies are mandatory not only in Japan but oversea.**

**By our firm commitment to technology, we continue to pursue newer area as well as  
 newer technologies. We believe it will bring us further progress.**

## Bridge SE Training & Dispatch

**Speedy dispatch of the bridge SE  
 undergone adequate training,  
 will be the decisive for your offshore development.**

### ● Bridge SE training (education courses) and deploy business.

Coordination ability of bridge SE will be the decisive factor of your offshore development. Further, by permanent stay of our bridge SE, bridge PM, cooperation with development members can be done smoothly and speedy implementation of flexible development system tailored to development projects becomes possible.

- Japanese business practices business etiquette educational course ... By language, culture, business customs and business etiquette training, offshore development with foreign engineers becomes smoother.
- Offshore development challenge management educational course ... Through the learning of problems and countermeasures in offshore development, foreign and Japanese engineers are transformed into a bridge SE.

- Educational courses on standardization of ISO9001 level process ... By the process standardization development of all engineers, system homogenization is feasible.
- Personal information protection-related educational courses ... By raising awareness about handling of personal and customer information in system development, information leakage prevention, thorough practice compliance.

## Introduction of Our Product

**We provide our original product development or  
 services expanded over a wide range.**

### ● SMART EDIT e-book creation service

Window, Macintosh version specification

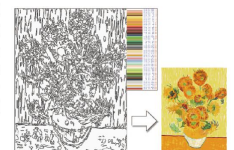

Our original development [SMART EDIT (Smart Edit)], allows simple creation, generation and distribution service of the e-book content. So far, the e-books were simply display of static text and picture-image, But SMART EDIT allows you to create rich content by linking the animation effects, audio, and video. In addition, without the need for programming knowledge to create, even during creation, as data can be transferred wirelessly to the device from PC, you can work while confirming the operation. In addition, if you use a dedicated distribution management site, it is possible to set various conditions for each content for content distribution.

### ● Image analysis generation service

Windows version specification

We have expanded this [Image analysis generation services] with the functionality of manufacturer. The original photos, illustrations, etc. can be automatically converted to a drawing with color-coded number for coloring. You can enjoy your original coloring, by coloring with the color-coded number matched with the number of such commercially available watercolor pencils and pigment. In addition, using the palette setting function, it is possible to limit the number of colors you want to use, so, color coded number of coloring can be freely established, and handling is possible from simple coloring to complex coloring. On the other, customized development to such as watercolor, pastel, watercolor, watercolor pencil and acrylic is also possible.

### ● WEB-3D image processing service

Windows specification

By using this [WEB-3D image processing service], we offers [dress-up carry case] to a suitcase manufacturer. The transparent polycarbonate front part of this carry can be removed from inside, allows you to change the inner design sheet. The WEB-3D image processing service makes it possible to display the sheet as 3D image on the WEB, add or edit text and graphics etc. on the sheet along with confirmation. For the customer goods with net sales, by taking advantage of the WEB-3D image processing services with this editing function, it will contribute to the increase in sales.
